

PHILIPS ZOOM!

Philips Zoom WhiteSpeed Whitening LED Accelerator is now better than ever

The Philips Zoom WhiteSpeed Light-Activated Whitening System is asked for by more patients than any other brand. And now we've made Zoom better than ever with advanced, new LED light technology, variable intensity settings, a worldwide public relations campaign to drive patients to dental professionals, and new programs to help you quickly and easily integrate Zoom into your practice.

Backed by marketing and training support, Zoom WhiteSpeed delivers on the promise of professional teeth whitening and profitable practice building.

The new Whitening LED Accelerator offers:

Variable Light Intensity

With adjustable settings of low, medium, and high, you can now customize the intensity for sensitive patients to ensure each patient receives a more comfortable treatment and a more pleasant experience all around.

Light Source Longevity

The advanced Philips blue LED technology provides approximately 50,000 hours of use, reducing operating costs, downtime, and decreasing energy consumption by 40% over previous Zoom models.

Greater Light Intensity

The Whitening LED Accelerator emits 100% greater light intensity,* with no compromise of safety.

Improved Ergonomics

The sleek, new design features a power cord wrap that conveniently stores the cord around the power pack — out of the way and out of sight. The contemporary counterweight also doubles as a handle to help you move the lamp into place, and the knobs have been enhanced for a better grip during usage. Larger casters also provide easier mobility.

"Across the board of varying dentition shade and even tetracycline staining, I feel confident Zoom WhiteSpeed can provide a noticeable result the patient is pleased with."
